sea is calling

2027 COLLECTION EN

A fantastic italian story

1971

Marco Arata and Attilio Rapallini, true sea lovers just barely into their twenties, start small-scale production of pronged heads and spear heads from scratch and SEAC (Subacquea E Affini Carasco) is founded.

1975

The first logo is created and the first official SEAC catalog is published.

1980

Production of the first spring-loaded and sling spearguns starts.

1982

SEAC reaches another milestone with the manufacture of new wetsuits, including the legendary Privilege.

1985

The development and production of the legendary Asso speargun mark yet another important step for SEAC and the spearfishing world as a whole.

1988

Stefano Makula, a SEAC sponsored athlete, reaches an incredible depth of -102 meters in variable weight freediving on the island of Giannutri and thus becomes world champion.

1989

Production expands with the new SEAC BCDs, including the Jump model.

1990

SEAC inaugurates its new plants in San Colombano Certenoli.

1993

A new adventure starts with in-house production of regulators.

1995

The iconic Extreme mask is born!

seac
sea is calling

A fantastic italian story

1999

In April, Nicola Brischigiaro breaks a new scientific world record in distance freediving under ice (85m in 1'40") on Lake Verney, using SEAC equipment.

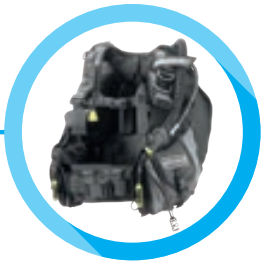

2008

SEAC has a new in-house workshop built, dedicated to regulators, with state-of-the-art ANSTI machines and new-generation technologies.

2001

SEAC designs and manufactures a revolutionary BCD: the Pro2000.

2010

New models of the SCUBA and freediving fins are developed and produced and expand the SEAC range even further.

2004

The second generation of SEAC arrives when Daniele Arata joins the company.

2012

SEAC opens its first facility in the United States and SEAC USA Corp. is thus created, based first in New York and then moving to Miami.

2006

SEAC further expands its product range and divides it into different lines: SCUBA, Snorkeling, Freediving, Swimming.

2014

After meticulous research, SEAC develops its first range of LED torches, including the renowned "R" series.

reddot award
product design

2007

The Icaro BCD wins the RedDot Product Design Award in 2007.

2017

Design and manufacture begins on the first full-face mask: Unica.

A fantastic italian story

2018

The new Driver and Partner wrist-mount diving computers arrive on the market, followed by Action and Action HR.

2019

SEAC opens a department dedicated to plastic molding of masks and fins at its San Colombano Certenoli plant.

2021

Now arriving to market, the new SCREEN scuba computer.

2022

The new APNEA and APNEA HR wrist-mount freediving computers arrive on the market.

2023

FRC® technology is here! Fully Responsive Compound makes it possible to make lighter, sturdier fins.

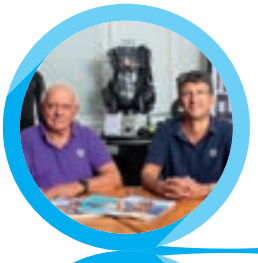

2023

SEAC unveils its new warehouse, with which it can power the entire company with solar energy using photovoltaic panels.

2024

Valentina Cafolla wins double world record in apnea under ice (140m) in Anterselva.

2025

New corporate governance: Daniele Arata is the new SEAC President.

TABLET, the first Bluetooth® computer and the LED TANK PROBE are born.

2025/2026

SEAC launches its new antifog masks, a product set to revolutionize the world of diving.

the story continues on the following pages...

sea is calling
seac
sea is calling

If the sea is calling, we answer with the sun.

The entire Seacsub industrial facility is now powered by renewable energy, thanks to a powerful new photovoltaic system.
This is our most recent investment in sustainability and comes on top of numerous other initiatives striving towards a sustainable future for all, such as re-shoring strategies and in-house production to reduce our carbon footprint deriving from transportation, our continuous research into new packaging with low environmental impact, and implementing company policies to reduce waste.
After all, only by taking care of the whole environment and those who live in it can you claim to respect the sea.

Headquarters in San Colombano Certenoli (Genova, Italy)
Over 15,000 m² of internal logistical area

Strict product safety through both proprietary equipment
and quality procedures

Innovative tools are constantly being updated
to produce accurate and reliable products.

After we inaugurated the new internal moulding department, the benefits are clear:

- A 50% reduction in plastic waste
- Reduction in the impact of transport
- Greater control over finished product quality
- Better in-stock availability

MySeac

All your dives,
always with you.

Bluetooth®

seac

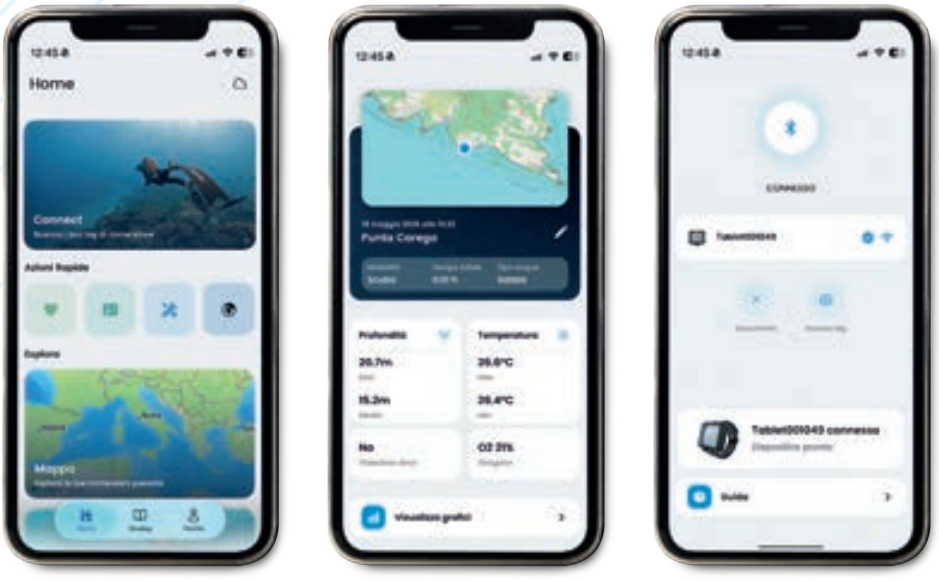

MySeac is the new application developed by SEAC for managing and downloading the logbook of dive computers. Designed to offer an intuitive and complete experience, MySeac allows users to easily transfer, store, and review their dive data, keeping their activity history always at hand.
Pairing the dive computer with the device is simple and immediate thanks to the Bluetooth interface, which connects the computer to a smartphone, tablet, or desktop computer, enabling fast and reliable data transfer.
With SEAC's dive site archive, each dive can be linked in seconds to its corresponding location, automatically enriching the logbook with precise site information. Users can also add new dive sites, helping expand the archive and sharing it with their fellow adventurers — a growing collection of knowledge created by the SEAC diving community.
Available for Android and iOS through Google Play Store and Apple App Store, MySeac is also compatible with Windows and macOS, offering maximum flexibility both on mobile devices and desktop computers.
With a modern, intuitive interface designed to accompany every dive, MySeac becomes the center of your underwater experience: a single tool to manage your digital logbook, organize dives, and preserve the memories of your adventures underwater.

Main features:
- Download and manage logbooks from SEAC dive computers.
- Fast connection via Bluetooth technology.
- Easy pairing with smartphones, tablets, and desktop computers.
- Integrated archive of SEAC dive sites.
- Instant association of dive sites with each recorded dive.
- Ability to add and share new dive sites with the SEAC community.
- Full visualization and management of dive history.
- Modern and intuitive interface.
- Compatibility with Android, iOS, Windows, and macOS.
- Available on Google Play Store and Apple App Store.

IT500 ICE - BLACK

NEW VERSION

- Ergonomic knob integrated with a dive / pre dive lever for breathing effort adjustment and Venturi control.
- OWS (Optimized Water Strainer) system: optimized front cover that breaks the frontal flow to reduce the risk of water pressure on the inhalation diaphragm and preventing accidental freeflow, given the design of the front cover and side case vents, prevents the possiblity of freeflow due to frontal water pressure and currents.
- Soft PU front cover and purge button that optimize both purge button action and water flow, reducing inhalation effort.
- The special geometry of the exhaust deflector that prevents water entering into the second stage even with the presence of strong front or side currents along with channels directing the exhaust bubbles to the sides of the face avoiding any annoying exhaust bubbles in front of the field of view.
- New hose guard designed in diameter and length to avoid any kinking of the LP hose. Optimized and ergonomic curvature for the user.
- Hot forged first stage to minimize weight and have all outlets both HP and LP ergonomically pre-oriented. High-performance membrane balanced. Number 2 HP ports. Number 4 LP ports.
- ICE kit: first stage anti-freeze system that minimizes the problem of freezing in cold water.

SCUBA 2027

FORZA ONE

NEW 2027

ATR: a system of shaped transverse ribs that, during the upward kick (negative phase), helps eliminate turbulence generated by the water flow passing through the three blade drainage vents holes. At the same time, it directs the flow toward the end of the fin, improving blade stability water sliding and increasing overall kicking efficiency. Additionally, during the downward kick (positive phase), it enhances stability and power by accentuating the channeling effect and providing structural support to the blade.

- Made in Italy
- Non-slip sole
- Stainless steel spring
- Ideal for diving center
- Anti Turbulence Rib Patent pending
- Neutral buoyancy
- Package 2 pieces/unit

ORIGINAL ANTIFOG SILICONE MASKS

SCUBA 2027

ANTI FOG ORIGINAL TREATMENT

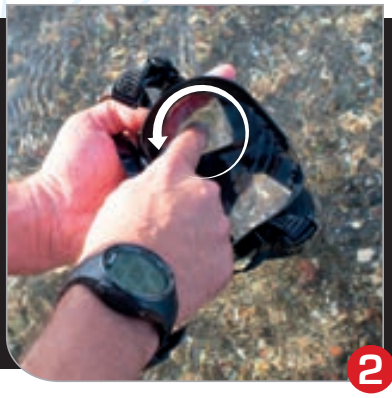

Scuba divers or freedivers are well aware of how fogging on the lenses can ruin or compromise a dive, **especially when operating at depth and encountering significant temperature variations.** Fogging occurs when the normal moisture inside the mask comes into contact with the cold surface of the glass, forming tiny droplets that obscure visibility. This may intensify during descent, when the diver passes through the thermocline and comes into contact with water that is significantly colder than at the surface.

To eliminate this particularly critical issue **during deep dives**, we apply **three coats** of a special **PLASMA** treatment called "**ANTIFOG ORIGINAL**" directly to the inner part of the lenses of our dive masks. This treatment makes the mask's glass completely hydrophilic. Once the diver performs a simple preparation, it activates protection that prevents the formation of condensation, ensuring clear vision throughout the dive **even in the most demanding conditions and at the maximum operational depths specified for scuba diving and freediving activities**.

SEAC has been applying this treatment to the lenses of masks specifically designed for diving for over a year, studying and optimizing every step to make the product as high-performance as possible. The process recognized as the exclusive ANTIFOG ORIGINAL involves multiple production stages during which the natural characteristics of the lenses are modified to stop them from fogging.
To ensure the utmost reliability that is needed for deep dives, SEAC repeats the entire procedure three times.

HOW TO PREPARE THE MASK BEFORE USE:
- **Before entering the water, fill the inside of the mask with water or submerge it in water.**
- **Gently rub the inner surface of the mask lens with your fingertips.**
- **Empty and rinse.**

TRIPLE PLASMA TECHNOLOGY

⚠ ATTENTION: BASIC INFORMATION ON THE ANTIFOG TREATMENT

The lenses of this mask have been integrated following an innovative treatment aimed at reducing fogging. Due to the innovative nature of this type of treatment, the effectiveness, duration, and consistency of its ANTIFOG performance cannot be guaranteed and are subject to a natural and progressive reduction based on care, storage, and use. Exclusion of defects: The reduction or loss of the ANTIFOG effect is an expected characteristic of the product and does not constitute a conformity defect under the legal warranty.

LEADER ONE ANTIFOG

NEW 2027

Package:
6 pieces/unit

Overmolded skirt in two materials.
Comfort silicone.
Skirt geometry optimized for sealing and comfort.
Front reinforcement made with micro-injection to prevent collapse at great depths.

OPTIONAL FABRIC STRAP INCLUDED

ANTIFOG SILICONE SNORKELING MASKS AND SETS

SNORKELING 2027

Anyone who snorkels and swims knows just how much fogging of the lenses can ruin the surface experience, making the observation of the marine environment less enjoyable. This occurs when the normal moisture inside the mask or goggles comes into contact with the glass surface and condenses into tiny droplets that obscure visibility, which is particularly annoying during snorkeling and swimming, **activities primarily conducted at the surface and in close proximity to it**.

To eliminate this issue, we have performed a special treatment called "**ANTIFOG**" directly on the lenses of our masks and goggles **specifically designed for snorkeling and swimming**. The treatment stops the lenses from fogging once the user performs a simple preparation.
Designed for the typical needs of snorkeling and swimming, this treatment provides effective and immediate protection against fogging, allowing you to fully enjoy the experience without distractions.

HOW TO PREPARE THE MASK BEFORE USE:
- **Before entering the water, fill the inside of the mask or goggles with water or submerge them in water.**
- **Gently rub the inner surface of the lenses with your fingertips.**
- **Empty and rinse.**

STANDARD PLASMA TECHNOLOGY

⚠ ATTENTION: BASIC INFORMATION ON THE ANTIFOG TREATMENT
The lenses of this mask have been integrated following an innovative treatment aimed at reducing fogging. Due to the innovative nature of this type of treatment, the effectiveness, duration, and consistency of its ANTIFOG performance cannot be guaranteed and are subject to a natural and progressive reduction based on care, storage, and use. Exclusion of defects: The reduction or loss of the ANTIFOG effect is an expected characteristic of the product and does not constitute a conformity defect under the legal warranty.

Security controls on the SEAC full-face masks

- SEAC abides by two fundamental principles in designing its *full-face snorkeling masks*:
- the user should need to employ the least possible **breathing effort**, **comparable to natural breathing**, out of the water and in a relaxing situation;
- and the level of residual carbon dioxide **CO_2** inside the skirt while inhaling must be **well below the safety limits**.

Even though there is no specific European regulation governing the manufacture of full-face snorkeling masks, SEAC has developed a series of **specific tests** that comply with the values set forth by the following European regulations:

- EN 1972:2015 establishes the requirements for the design and manufacture of snorkel tubes, limited to breathing effort;
- EN 16805:2015 establishes the requirements for the design and manufacture of dive masks;
- EN 136:2000 establishes the minimum requirements for the manufacture of full-face respiratory protection masks, limited to tests checking the CO_2 in inhaled air;
- EN 250:2014 regarding open-circuit compressed-air self-contained breathing apparatus and its components, limited to tests checking the CO_2 in inhaled air, related to the full face masks or oro-nasal half masks for SCUBA diving.

The ITALCERT test report on the residual CO_2 content.

SEAC had its full-face masks also tested by a third-party laboratory. Please see the results below:

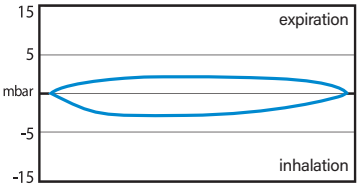

CO_2 content limit values on full-face SEAC (test results with 25 RPM / 2.5 l)

Natural breathing effort

In the **SEAC labs**, batches of full-face masks are tested with **Ansti machines**, specifically to measure the **dynamic performance of human breathing**, and with **specific SEAC equipment** to **check levels of CO_2** in the air inhaled through the masks.

SNORKELING ACCESSORIES

SNORKELING 2027

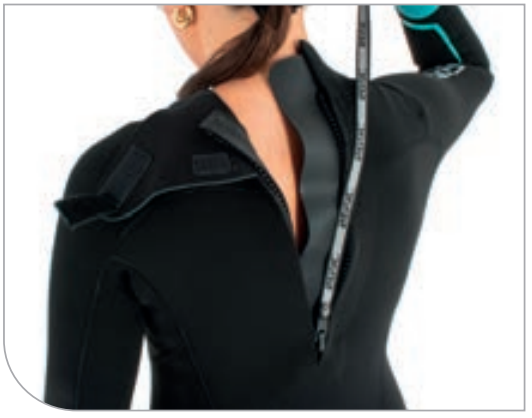

WALKER: TOTAL COMFORT FOR YOUR TRAINING.

The WALKER is a versatile wetsuit designed to provide thermal comfort, practicality, and freedom of movement for various water sports, ranging from longe-côte to surfing, SUP, and open water swimming.
The double front and back zipper system makes the suit easier to put on and take off, ensuring greater autonomy. Ankle zippers make it even easier to put on and take off, while internal padding prevents direct contact of the zippers with the skin.
The adjustable Velcro collar, both front and rear, allows the closure to be adjusted: tighter to limit water ingress in cold conditions, looser to enhance ventilation on milder days.
The 4/3 mm differentiated thickness optimizes warmth and mobility: 4 mm on the torso and back for effective insulation, 3 mm on the arms and legs for more natural movement.
Made from 100% CR neoprene that is glued and stitched with ultra-stretch lining, the WALKER provides superior elasticity, extended comfort, and a natural feeling of flexibility during every activity.

SWIMMING 2027

A COMPLETE RANGE WITH A GREEN SOUL.
For many years now, SEAC has been developing and manufacturing, through careful market research, the best products to meet the needs of all swimmers.
Among these products is the antifog treatment applied to selected swimming-goggle models.
The same commitment is used to develop new packaging made with 100% recyclable packaging and with a clearly recognizable family feeling and visible for display at your point of sale.

MESU

- Low profile, hydrodynamic tube that reduces friction and enhances breathing performance
- Easy control of stroke movement in freestyle without the need to turn the head for side breathing.
- Facilitates cardiovascular training and increases lung capacity.
- Elastic, lightweight front band with integrated soft insert and silicone headband for maximum comfort.
- Adjustment buckles on both sides.
- Silicone mouthpiece, minimizes jaw fatigue.
- Bleeder valve positioned to maximize the discharge of excess water.

FREEDIVING & SPEARFISHING **2027**

FRC®
FULLY RESPONSIVE COMPOUND

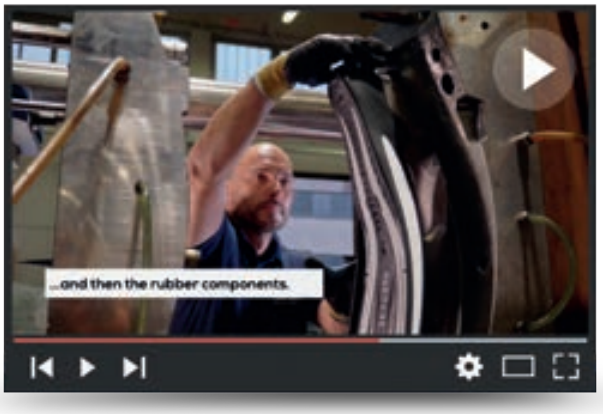

SEAC is proud to present the new FRC® - Fully Responsive Compound technology, featured right now on the blades of our SEAC BM-30 long fins. It all started with the search for a polymer blend that would allow us to produce fins with similar performance to those made of carbon fiber and glass, but eliminating the well-known fragility problems of these composites.
We then arrived at a compound with unprecedented mechanical properties that SEAC's design and manufacturing experience has transformed into a new technology dedicated to making even higher performance fin blades.
FRC® - Fully Responsive Compound technology now meets all our needs:

- negative fins and blades that are thinner than their predecessors in technopolymer thanks to the fluidity and specific weight of the material;
- the product design takes advantage of the mechanical properties of the compound for an elastic response similar to that of carbon and glass fiber;
- no risk of breakage or permanent deformation thanks to the high resilience and high resistance to yield and breakage of the compound, even at low temperatures;
- resistance and high elastic modulus allow you to fully exploit the typical geometry of carbon fiber and glass blades without having to use any reinforcement or protection ribs;
- reduced carbon footprint compared to common technopolymers used in the sector and total absence of toxic elements.

NEW DESIGN AND OPTIMISED CLOSURE

SHIELD

NEW 2027

- Reinforced glove for marine activities and underwater fishing, developed to offer high protection without compromising comfort and freedom of movement.
- The durable structure protects against cuts, punctures, abrasions, and accidental impacts.
- Shock-absorbing polyurethane rubber inserts on the back, knuckles, and fingers shield the most exposed areas, while the nitrile palm with a sandy finish ensures optimal grip even in wet conditions or in the presence of oils.

2 mm thickness

Superstretch

Ultra grip nitrile palms

ROCK GRIP

NEW 2027

- High-protection glove for lobstering and underwater fishing, designed to offer comfort, sensitivity, and dexterity in demanding conditions.
- Its structure provides effective protection against cuts, punctures, and impacts, making it ideal for activities in marine environments.
- The palm with sandy nitrile coating ensures a secure and reliable grip even on wet, damp, or oily surfaces, improving control when handling equipment and materials.
